EXPORT

Manufacturing & Distribution Centers ●
Export Countries ●

AKTAS GROUP was established in 1938 as Sait Aktas Rubber and Tire Industry and in 1972 started producing first Air Springs in Bursa, home of the Turkish Automotive Industry. After going through an extensive reorganization, name of the company was changed to Aktas Air Suspension Systems Company and since then it has been serving its OEM and aftermarket customers worldwide.

Today Aktas Group is a rapidly growing global supplier of high quality air springs and industrial rubber components with 7 strategic locations on four continents, reaching a manufacturing capacity in excess of 2.5 million units. Aktas Group has 85 % market share in the Turkish Heavy Duty Air Spring Aftermarket and has been certified by ISO TS 16949 since 2002. Its internationally proven quality has also placed Aktas Group among the leading European Manufacturers.

Aktas Group increase its global presence by exporting 80% of its products to more than 80 countries around the world. Highly preferred AIRTECH brand has a wide range of more than 700 different types of Air Springs which are being manufactured in eight manufacturing plants located in Asia, Europe, North and South America. Aktas Group can meet any demand and exceed all expectations with its extensive experience, high technology, skilled workforce and commitment to its partners.

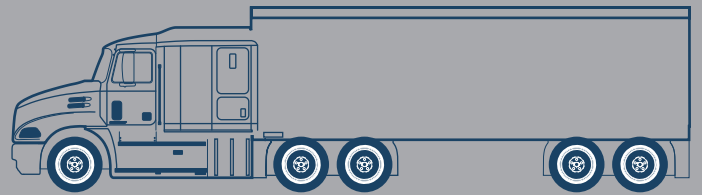

GLOBAL POWER OF AKTAS GROUP

PRODUCT INFORMATION

TRUCK // TRAILER

Trucks of all types, particularly container vehicles and vehicles with interchangeable bodies, are fitted with air spring with great success, here there is a wide variety of possible uses on the front, rear and tag axle, as well on the leading axle in the case of semi - trailer trucks

Apart from low natural frequency which protects the vehicle, load and road, airsprings offer the possibility of raising and lowering the vehicle body for loading and unloading.

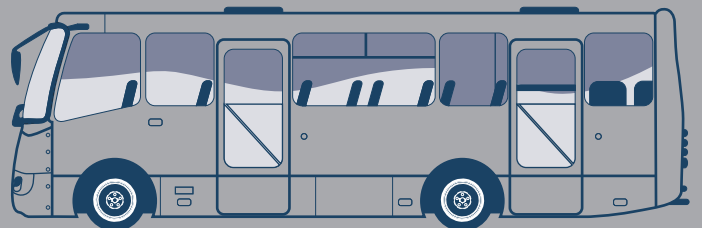

BUS //

Buses benefit the great advantages offered by air spring to achieve consistently high degrees of riding comfort and vehicle heights independent irrespective of load.

This application generally involves two airsprings being fitted to the front axle and four to the rear axle in the buses.

In Europe and USA, all buses are fitted with air springs, whereas, in many other countries the usage of air suspension systems is increasing

Airsprings are developed according to do specified conditions, such as load capacity characteristic and spring deflection. For commercial vehicle a distinction is made between basic types of air springs, namely rolling lobe air springs and convoluted.

ROLLING LOBE AIR SPRINGS

WITH CONICAL BEADS

Depending on their height, they achieve high strokes resulting in high comfort without a major change in diameter. This high stroke advantage of conical bead rolling lobe air springs enables the loading / unloading and assembling / disassembling operation easier for these vehicles.

The conical sealing surfaces of these springs make them to be reused when the air spring bellows are replaced.

WITH CLAMPING BEADS

Rolling lobe air springs with clamping beads differ from the ones with conical beads by the method of fixing. The fixed connection prevents the air springs to be detached from the plate even under the excessive movement conditions.

Rolling lobe air springs with clamping beads are supplied by Airtech as a system i.e. the air spring bellows, plates and the internal bumper, where necessary assembled as a complete unit.

TRACEABILITY

- If order number starts with 11... means Only Rubber
- If order number starts with 12... means Service Assembly
- If order number starts with 13... means Complete (with piston)

Complete product codes can be differentiated according to piston material

- If order number ends with: K means Steel Piston
- If order number ends with: KPP means Plastic Piston
- If order number ends with: K-ALU means Aluminium Piston
- If order number ends with: P means Service Assembly

ROLLING AIR SPRINGS

WITH SEMI - ASSEMBLY

AIR FITTING

The part that inlet the air

TOP PLATE

Connects the air spring to the vehicle chassis

CORD REINFORCED FABRIC

Maintain the loading capacity of air spring

RUBBER LAYER

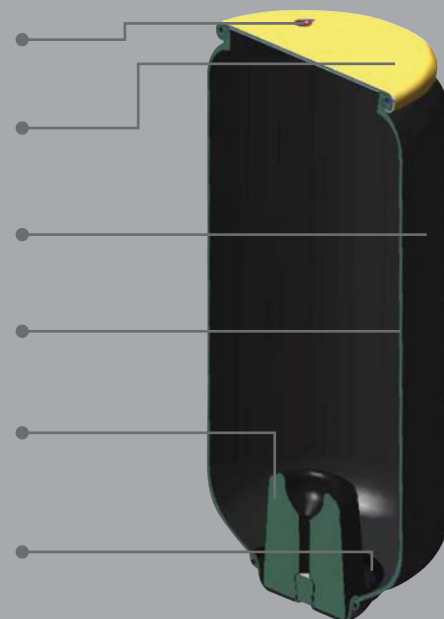

Cover and strengthen of Cord - Reinforced fabric as inner and outer layers

BUMPER

A solid rubber bonded to plate or piston in order to prevent damage of air spring of the vehicle

BOTTOM PLATE

Holds the rubber bumper and connects the airspring to the piston on the vehicle

WITH PISTON

AIR FITTING

The part that inlet the air

TOP PLATE

Connects the air spring to the vehicle chassis

CONNECTION STUD

Connects the air spring to the vehicle chassis

BUMPER

A solid rubber bonded to plate or piston in order to prevent damage of air spring of the vehicle

RUBBER LAYER

Cover and strengthen of Cord - Reinforced fabric as inner and outer layers

CORD REINFORCED FABRIC

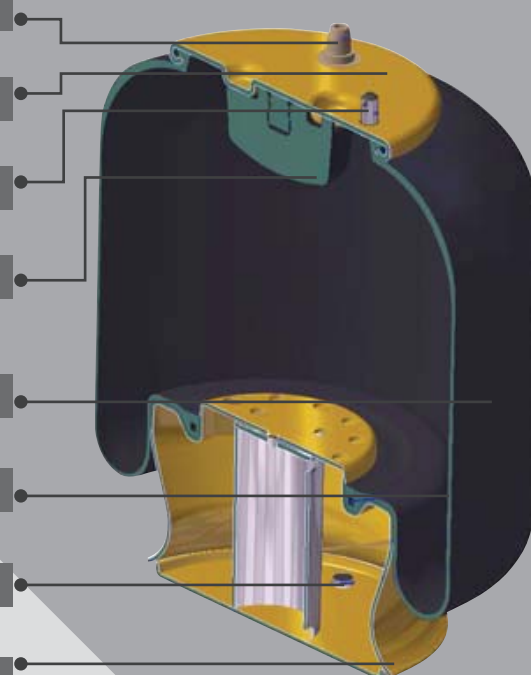

Maintain the loading capacity of air spring

PISTON BOLT

Connects the air spring to the vehicle axle

PISTON

The lower part of the spring assembly that the rubber roll over

WORKING CONDITION

PREVENTATIVE MAINTENANCE

All surfaces including the air spring and the installation area should be free from oil, petroleum and solvents.

Hydrolic and pneumatic line of the air supply systems should be leakproof.

Air pressure should not exceed 7 bar / 101 psi

Ambient temperature should be between - 40°C to + 70°C

There should be sufficient clearance around the air spring to prevent any contact.

All bolts should be tightened according to the required torque specifications.

Vehicle should be loaded as per factory specifications and loads should be properly secured.

Air springs should be kept clean. Use water and soap for cleaning.

WARRANTY

All air springs from Aktas Group are warranted to be free from defects in material and workmanship.

This warranty excludes any damage caused by environmental conditions, improper installation, accidents, incorrect applications and use in any application other than what is specified under original equipment cross references.

No representative or sales agency other than Aktas Group itself is authorized to make any additional promise or agreement regarding the warranty of the products that are listed in this catalogue other than what is mentioned above.

In no event shall the manufacturer be liable under this warranty for any incidental or consequential damages including but not limited to loss of freight, loss of profit, equipment or personal downtime.

ISO / TS 16949: 2002

ISO 9001: 2000

Technical drawing of the AIRTECH 331114 air spring. The side view shows a cylindrical body with a top width of $\varnothing 227$, a mounting eye diameter of $\varnothing 11.9$, a total height of 131.5, a base height of 21, a base width of $\varnothing 220$, and a central air line diameter of $\varnothing 11.9$. The text "AIRTECH 331114" is printed on the side. The top view shows a circular shape with a 45° chamfer, a hole labeled M14x1.5, a distance of 56.5 from the center to the hole, and a distance of 140 between two mounting points. The bottom view shows a circular shape with a central hole diameter of 98.	TOP VIEW	CROSS REFERENCE

PRODUCT ID AND TRACEABILITY

BARCODE

barcoding system provides AIRKRAFT products a maximum traceability down to the raw material. Via the barcode number on the label, it is possible to answer all questions regarding the product, until the final customer.
