CERTIFICATO N. 5064/01/S
CERTIFICATE No.

SI CERTIFICA CHE IL SISTEMA DI GESTIONE PER LA QUALITÀ DI
IT IS HEREBY CERTIFIED THAT THE QUALITY MANAGEMENT SYSTEM OF

CRAVER INDUSTRY FOR THE VEHICLE S.R.L.

VIA GIUSEPPE BARBAROUX, 46 10122 TORINO (TO) ITALIA

NELLE SEGUENTI UNITÀ OPERATIVE / IN THE FOLLOWING OPERATIONAL UNITS

VIA DONATELLO, 15 10071 BORGARO TORINESE (TO) ITALIA

È CONFORME ALLA NORMA / IS IN COMPLIANCE WITH THE STANDARD
ISO 9001:2008

PER I SEGUENTI CAMPI DI ATTIVITÀ / FOR THE FOLLOWING FIELD(S) OF ACTIVITIES

PROGETTAZIONE E COSTRUZIONE DI COMPONENTI PNEUMATICI ED IDRAULICI PER IL SETTORE AUTOMOTIVE

DESIGN AND MANUFACTURE OF PNEUMATIC AND HYDRAULIC COMPONENTS FOR THE AUTOMOTIVE SECTOR

La validità del presente certificato è subordinata a sorveglianza periodica annuale / semestrale ed al riesame completo del sistema di gestione con periodicità triennale
The validity of this certificate is dependent on an annual / six monthly audit and on a complete review, every three years, of the management system
L'uso e la validità del presente certificato sono soggetti al rispetto del documento RINA: Regolamento per la Certificazione di Sistemi di Gestione per la Qualità
The use and validity of this certificate are subject to compliance with the RINA document : Rules for the certification of Quality Management Systems

Prima emissione First Issue	02.05.2001
Emissione corrente Current Issue	12.12.2012
Data scadenza Expiry Date	22.11.2015

Dott. Roberto Cavanna
(Managing Director)

THE INTERNATIONAL CERTIFICATION NETWORK

CERTIFICATE

IQNet and its partner
CISQ/RINA
hereby certify that the organisation

CRAVER INDUSTRY FOR THE VEHICLE S.R.L.

VIA GIUSEPPE BARBAROUX, 46 10122 TORINO (TO) ITALIA

in the following operative units

VIA DONATELLO, 15 10071 BORGARO TORINESE (TO) ITALIA

for the following field of activities

DESIGN AND MANUFACTURE OF PNEUMATIC AND HYDRAULIC COMPONENTS FOR THE AUTOMOTIVE SECTOR

has implemented and maintains a
Quality Management System

which fulfills the requirements of the following standard

ISO 9001:2008

Registration Number: **IT-17551**

First Issue : 2001-05-02

Current Issue : 2012-12-12

Expiry Date : 2015-11-22

Michael Drechsel

President of IQNET

Ing. Claudio Provetti

President of CISQ

It includes three views: a front view, a top view, and a bottom view. The front view shows a cylindrical body with a top flange and a bottom flange. Dimensions include a total height of 285mm, a top flange diameter of 85mm, a top flange thickness of 15mm, a top flange inner diameter of 45mm, a top flange outer diameter of 61mm, a bottom flange thickness of 15mm, a bottom flange inner diameter of 75mm, and a bottom flange outer diameter of 190mm. The top view shows a circular flange with a central hole and a bolt hole. The bottom view shows a circular flange with a central hole and a bolt hole. The bolt hole is labeled M16x1.5 and the central hole is labeled M14.	<table><tr><th>Codice Code</th><th>Costruttore Manufacturer</th></tr><tr><td>41218560</td><td>IVECO</td></tr></table>		Codice Code	Costruttore Manufacturer	41218560	IVECO

Problemi e cause di rottura delle molle aria

Problems and reasons of breakage of air springs

Sovraestensione:

Una molla aria risulta essere stata sottoposta ad una sovraestensione quando presenta una bombatura sul piatto o sul pistone, specie in corrispondenza dei prigionieri; in aggiunta è possibile che la membrana sia “scalzata” dal piatto oppure strappata. La sovraestensione può essere causata da molteplici fattori quali:

- * Valvola livellatrice rotta o starata
- * Ammortizzatore rotto
- * Finecorsa (qualora presente) difettoso
- * Molla aria non adatta all'applicazione

Per evitare questo problema si consiglia una corretta taratura della valvola livellatrice e, sui mezzi destinati a percorrere percorsi gravosi quali ad esempio fuoristrada, cave cantieri, una verifica periodica degli ammortizzatori.

Infatti pur non essendo progettati per funzionare da finecorsa in estensione spesso rappresentano l'unica protezione della sospensione in tal senso.

Overextension:

An air spring shows to have been submitted to an overextension, when it has a bulge, it is rounded on the plate or on the piston, especially in correspondence of the screws; moreover, it is possible that the diaphragm is removed from the plate or is ripped. Various can be the reasons of the overextension, such as:

- * Levelling valve broken or not calibrated
- * broken shock absorber
- * Limit switch (if present) is defective
- * air spring is not suitable for the application

To avoid this problem, we recommend a correct setting of the levelling valve and periodic check of the shock absorbers on the vehicles, like off-road, four wheels and those used in construction sites.

Indeed, although they are not projected to operate as limit switches; but often, by extension are thus the only one protection of the suspension.

Rottura di boccole e viti filettate / Breakage of bushings and threaded screws:

Questa problematica si verifica quando è stata utilizzata una coppia di serraggio eccessiva. Si raccomanda, pertanto, l'utilizzo di una chiave dinamometrica.

This problem occurs if you have used an exaggerated tightening torque. It is recommended, therefore, the use of a dynamometer key.

Abrasione della membrana:

L'abrasione della membrana di una molla aria può essere causata dal continuo sfregamento con altri componenti del veicolo, oppure con componenti estranei che in genere si infilano tra la membrana e il pistone.

Nel primo caso, solitamente, la membrana sfrega con tubazioni dell'impianto pneumatico mal fissate; questo sfregamento, che potrebbe sembrare di poco conto, con i continui movimenti del soffietto può consumarne la gomma fino a provocare un buco.

Nel secondo caso detriti quali polvere, sale, sabbia o pietroline si accumulano tra pistone e membrana o tra le balze (nel caso di Torpress); con i continui avvolgimenti della membrana sul pistone questi detriti provocano l'abrasione e la foratura della gomma.

Nel caso di detriti di dimensioni consistenti è possibile che venga danneggiato anche il pistone in composito.

Un'altra causa di abrasione è il montaggio errato o il mal funzionamento di altri componenti della sospensione che portano la molla aria a lavorare disassata.

Per ovviare a questi problemi si consiglia di posizionare e fissare tubi e cavi in modo che non entrino mai in contatto con la membrana.

Inoltre si raccomanda di pulire periodicamente i soffietti, specie nei mesi invernali dove le strade sono sporche di sale e sabbia.

- Abrasion of the diaphragm:

The abrasion of the diaphragm of an air spring can be caused by the continuous rubbing with other components of the vehicle , or with extraneous components, that generally insert between the diaphragm and the piston .

In the first case , usually , the diaphragm rubs the wrong fixed pipes of the pneumatic system ; this friction, which may seem insignificant, with the constant movement of the rubber bellows can consume up the rubber to cause a hole.

In the second case debris such as dust, salt, sand or small stones amass between piston and diaphragm or among the convolutions (in the case of Torpress) ; with the continuous wrapping of the diaphragm on the piston these debris cause abrasion and boring of the rubber.

In case of debris of big dimension, it may be even damaged the piston in composite.

Another cause of abrasion is wrong installation or disease of other components of the air spring, that make the air spring work not aligned.

To avoid such kind of problems it is recommended to put and fix pipes and cables in such way, that never could make contact with the diaphragm.

It is also recommended to periodically clean the air bellows , particularly in winter, when the streets are dirty with salt and sand.

Scoppio della molla - Burst of Spring:

Lo scoppio di una molla aria è generalmente dovuto ad un sovraccarico, pertanto si raccomanda di non sovraccaricare mai la sospensione e di non superare mai la pressione massima consentita.

The burst of an air spring is generally due to overload, so it is recommended never to overload the suspension and never to exceed the maximum allowed pressure

Membrana tagliata e pistone danneggiato in corrispondenza del taglio.

Questa situazione si verifica quando:

- * Il mezzo viene utilizzato senza pressione nelle molle aria
- * Il mezzo viene sovraccaricato
- * La molla aria lavora in modo disallineato
- * Molla aria non adatta all'applicazione

Per evitare questi problemi si consiglia di non sovraccaricare mai il mezzo e di non percorrere mai della strada senza l'adeguata pressione all'interno delle molle aria. Inoltre è bene controllare l'allineamento della molla aria che può venir meno a causa di un montaggio non corretto o di un malfunzionamento della sospensione.

Cut diaphragm and damaged piston in correspondence of cut:

That situation occurs when:

- * The vehicle is used without pressure in the air springs
- * The vehicle is overloaded
- * The air spring works not aligned
- * the air spring is not suitable for the application

To avoid above problems it is recommended to never overload the vehicle and not to drive without the proper pressure in the air springs. It is also important to check that the air spring is aligned. It could be not aligned, because of a wrong installation or disease of the suspension.

Usura:

E' bene ricordare che le molle aria, come la maggior parte dei prodotti specie quelli in gomma, non sono eterne; con i continui avvolgimenti e svolgimenti della membrana sul pistone, la gomma perde parte della sua elasticità, e nelle zone dove la gomma "si arrotola" iniziano a comparire delle micro fessure (crepe) longitudinali che con il tempo si ingrandiscono. Per evitare di essere piantati in asso e lasciati per strada, si consiglia di controllare periodicamente l'usura delle molle e di sostituirle quando sono troppo logore.

Wear:

It is important to remember that air springs, as most of rubber products, are not eternal; with the continuous winding and unwind of the diaphragm on the piston, rubber loses some of its elasticity, and in areas where the rubber "rolls up" longitudinal micro cracks begin to appear, that become bigger with time. To avoid to stop on the street, it is recommended to check periodically the wear of the springs and replace them when they are threadbare.
